EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Raymond R. Tabandeh on 1/25/06.

3. The claims have been amended as follows:

27. (Currently Presented) The system of claim 81 wherein the ~~separated component~~ voice frame comprise first and second portions, the tone detection system further comprising a state machine to invoke the detector to detect the tone in the second portion of the ~~separated component~~ voice frame.

29. (Currently Presented) The system of claim 81 wherein the ~~separated component~~ voice frame comprise first and second frames, the first frame preceding the second frame in time, each of the first and second frames having first and second portions, the tone detection system further comprising a state machine to invoke the detector to detect the tone in the second portion of the first frame, and to invoke the detector to process the tone in the first portion of the second frame only if the detector detects the tone in the second portion of the first frame.

39. (Currently Amended) A system of detecting a dual tone in a voice packet having a plurality of voice frames comprising:

a buffer for receiving the voice packet over a network;

a first bandpass filter to separate ~~the~~ a first component from the voice packet;

Art Unit: 2661

a second bandpass filter to separate ~~the~~ a second component from the voice packet;
a first detector to determine a frequency of the separated first component;
a second detector to determine a frequency of the separated second component;
a first comparator to compare the frequency of the first component to at least one of a plurality of frequency ranges to determine whether the separated first component comprises one of the dual tone; and

a second comparator to compare the frequency of the separated second component to at least one of the frequency ranges to determine whether the second component comprises the other one of the dual tone, wherein the determination of the dual tone ~~tones~~ is delayed until the last frame of the voice packet is processed.

85. (Currently Amended) The dual tone detection system of claim 39 further comprising a first power estimator to estimate power of the separated first component, the first comparator further comparing the estimated power of the separated first component to a power threshold, the determination of whether the separated first component comprises said one of the dual tone ~~tones~~ being further a function of the comparison.

86. (Currently Amended) The dual tone detection system of claim 39 further comprising first and second power estimators each estimating power of a respective one of the first and second separated components, and a twist estimator to compare a ratio of the estimated power for the first and second components, ~~the~~ determination of whether the voice packet comprises the dual tone being further a function of the comparison.

Conclusion
